

Streamlining the future of business

Mirror Streamline

Enterprise Resource Planning and Management Software

Produce more with less resources

For decades, ever-increasing labour costs have been inflating production costs, and credit had to sustain this growth. Now the bubble has burst, and only those companies who embrace innovation and higher efficiencies, will be able to succeed in the new, volatile global economy driven by reduced production costs.

Production costs can be reduced in various ways:

Unify and simplify

When you unify, you stop duplication. When you simplify, you take fewer steps to achieve the same - and often better - end-result. *Mirror Streamline* is based on this philosophy, thus providing a compact and ergonomical, yet comprehensive solution that integrates, in real-time, all major functional areas: HR and Payroll, CRM and Accounting, Inventory and Production, and Custom Modules.

Focused and motivated employees

Use HR, Payroll and Employee Self-Service (ESS) to inform and motivate your employees and to minimize HR admin costs. Employees have access to their general HR information, time sheets, payslips, leave records, performance agreements - and management's feedback on performance.

Accurate costing information and measuring factory efficiencies

Sales personnel need accurate costing information to ensure acceptable profits. *Streamline's* inventory and production features maintain cost components for both raw materials and recoveries. Factory efficiencies can also be measured.

Rigid stock control and optimal stock levels

Stock is cash! Implement a clear and consistent item master, and start ordering and issuing stock against stock codes. By ordering only what you need, you can get rid of excess stock that ties up valuable cash. With accurate information on stock levels, bill-of-materials, sales orders, etc., *Streamline* calculates optimal to-order quantities.

The internet creates new opportunities

Mirror offers internet hosting and daily data back-up services at no additional cost. This allows branch offices as well as mobile users to work from a centralised database through any IP connection. Alternatively, *Streamline* may be deployed on an internal network or stand-alone PC.

Capitalising on your Microsoft Investment

Streamline runs on Windows XP, up to Windows 7. As reporting format, Microsoft Excel/Word 97 or later can be used. Implementing *Streamline* does not require any additional third-party software licenses.

Getting started

For a no-obligation evaluation, a trial copy may be downloaded from www.mirrorsa.co.za. *Streamline* then connects to a demo company allowing you to get a general feel for the software. A consultant will thereafter assist you to set up a database for your exclusive use. On this database, all transactions are simulated in order to develop training materials and to start the configuration process for the go-live database.

What will it cost me?

There is no up-front evaluation or acquisition cost. When going live, the software is simply licensed on an annual or monthly basis. The cost is determined by the number of employees in the organisation.

By simulating all transactions on the training database, and working through the on-line documentation, it is possible to implement *Streamline* with minimal help from a Mirror consultant.

Ultimately, the implementation cost and duration will depend on the simplicity or complexity of your business, as well as users' computing and accounting skills.
